---

## SUMMARY

Final-year Computing and Software Systems student at the University of Melbourne, focused on frontend development. Experienced with React and TypeScript through client, team, and independent projects, including UI development, APIs, and PostgreSQL-backed features.

---

## PROJECT EXPERIENCE

### ACE Tennis Scheduler – Frontend Developer | Client Project

2026 - Present

*Next.js, TypeScript, Ant Design, Figma, Git, Docker*

Tennis fixture scheduling system developed for the Waverley Tennis Association.

- Co-designed and refined the Competition Management workflow based on feedback from regular client meetings.
- Designed frontend workflows for team filtering, constraint review, scheduling progress and failure states, and implemented Section/Club filtering in the existing Next.js application.
- Worked with backend developers to define the data needed for scheduling progress, validation errors, constraint results, and failed schedules.

### Lunchie Munchie – Software Developer | Team Project

2026 - Present

*React, TypeScript, Supabase, PostgreSQL, Git*

Food discovery app with restaurant course planning, social features, and customisable character.

- Developed social feed and profile features with likes, saves, comments, follows, and public profiles.
- Built the character customisation system for outfits, accessories, expressions, and room states.
- Implemented persistent character progression and equipped-item state across sessions.
- Worked with the team through feature branches and pull requests to integrate frontend changes into the shared codebase.

### ShiftPilot – Full-Stack Developer | Independent Project

2026 - Present

*Next.js, NestJS, Prisma, PostgreSQL, Docker*

Workforce scheduling app for creating weekly rosters and checking staff coverage.

- Built a scheduling model that supports multiple employees and different staffing requirements for each role.
  - Added coverage checks to flag understaffed shifts before a roster is published.
  - Kept staffing requirements separate from employee assignments to make shift reassignment easier.
  - Built the application with Next.js, NestJS, Prisma, PostgreSQL, and REST APIs.
- 

## WORK EXPERIENCE

### Customer Service Representative – HamaFilm, Melbourne, VIC

Mar 2023 – Present

Assist customers with film processing, photo services, and general enquiries while handling day-to-day store operations.

---

## EDUCATION

### Bachelor of Science - Computing and Software Systems

Expected 2026

The University of Melbourne, Parkville, VIC

---

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Java, C, SQL

**Frameworks & Data:** React, Next.js, NestJS, Supabase, PostgreSQL, Prisma

**Tools:** Git, GitHub, Docker, Figma, VS Code
